

Bunker Hill Community College

Campus Facilities Updates

The maintenance, upkeep, and improvement of the College's existing campus facilities in Charlestown and Chelsea is a core part of the ongoing work of the BHCC facilities team and the College's vendors and contractors. In recent years—and in the year to come—several important campus improvement projects have or will come online and result in an improved user experience across the College.

Chelsea

- Expanding to occupy an additional floor, which will house the office of Workforce Development and the new Enterprise Center for Entrepreneurship and Training.
- A new, fully-staffed Student Central space in the building's main lobby will replace the smaller existing offices, offering the same Student Central services as the Charlestown Campus.
- DISH automated and refrigerated food lockers will make meals and necessities available for pick up at any time the Chelsea Campus is open. These lockers are similar to the existing ones on the Charlestown Campus.

Charlestown

- Renovation of Charlestown restrooms: Formerly gender-segregated restrooms in D-building have been converted to gender-inclusive and fully-accessible toilet rooms, with each room containing its own distinct and private facilities. Renovation of B-Building restrooms is ongoing and expected to be complete later this year.
- Parking Lot 7 was completed in early 2023, converting what had formerly been the site of the M-Building (built as temporary classroom space in the 1980s) to approximately 40 new faculty and staff parking spaces, with fully accessible entrance to D-Building directly from the lot.
- Utility work, including work on the College's water and electrical systems, which provide resiliency, efficiency and capacity upgrades to existing campus systems.
- Elevators in the E, D, and B buildings have been replaced or upgraded for more reliable service and safe operation.
- Older tile flooring has been replaced with new vinyl composition tile flooring in hallway areas of building B, C, and D, creating improved and safer walking conditions for all users.
